

CompTIA Security+

BILINGUAL STUDY SUITE (SY0-701)

WEEKLY STUDY PLAN

A rigorous 8-week weekly preparation schedule mapping the official SY0-701 domains, daily targets, and essential bilingual glossaries.

Primary language of study: ENGLISH (Official Exam Standard)

Portuguese translation & annotation support included

Designed for candidates studying with Shelly & Gibson SY0-701 Study Guide
Created in 2026 | Safe & Comprehensive Preparation

Introduction & Exam Guidelines

This 8-Week Study Plan is designed to take an IT beginner and prepare them comprehensively to pass the CompTIA Security+ (SY0-701) certification exam. The plan balances reading theoretical chapters, performing active recall using flashcards, mapping concepts visually, and taking realistic practice exams.

CompTIA Security+ SY0-701 consists of five core domains:

- 1.0 General Security Concepts (12% of exam)
- 2.0 Threats, Vulnerabilities, and Mitigations (22% of exam)
- 3.0 Security Architecture (18% of exam)
- 4.0 Security Operations (28% of exam)
- 5.0 Security Program Management and Oversight (20% of exam)

Core Philosophy: Focus your study on terms in ENGLISH, as they are the gold standard for the real exam. Utilize the PORTUGUESE support notes for consolidation, fast-track comprehension, and resolving complex technical topics.

WEEK 1: General Security Concepts & Core Basics

Semana 1: Conceitos Gerais de Segurança e Fundamentos

Focus: Domain 1.0: General Security Concepts (12%)

Objective / Objetivo:

Understand the core goals of information security (CIA triad), differentiate between security control categories and types, and comprehend the importance of change management and data classification.

Chapters Covered / Capítulos:

- Chapter 1: Mastering Security Basics
- Chapter 11: Implementing Policies to Mitigate Risks (Change Management & Data Protection)

Daily Tasks / Cronograma Diário:

- Monday:** Read Chapter 1: Mastering Security Basics (Security goals: CIA, non-repudiation, AAA).
- Tuesday:** Study Chapter 1 Security Controls (Categories: Technical, Managerial, Operational, Physical; and Types: Preventive, Deterrent, Detective, Corrective, Compensating, Directive).
- Wednesday:** Read Chapter 11: Change Management & Data Protection (Data types, classification, sanitization, change approval, backout plan).
- Thursday:** Active recall: Review Week 1 Flashcards and create your own mind map of control types in Portuguese.
- Friday:** Practice Quiz: Solve Chapter 1 & Chapter 11 end-of-chapter questions (English) and study the Portuguese explanations.
- Saturday:** Weekly Review: Consolidate the bilingual glossary of key terms. Study the 'Golden Rules' for Change Management.
- Sunday:** Rest day / Catch-up day.

Bilingual Key Glossary / Glossário Bilingue:

Definition / Descrição
Ensures that unauthorized entities cannot access sensitive data (
Ensures that data has not been modified, tampered with, or corrup
Ensures systems and data are accessible when needed by authorized
Controls implemented using technology (firewalls, encryption, ant
Controls using administrative methods, policies, risk assessments
Controls executed by people in daily routines (media restoration,
Controls that physically block access (fences, locks, security gu
Structured process to request, evaluate, approve, and implement s

WEEK 2: Identity and Access Management (IAM)

Semana 2: Gestão de Identidade e Acesso (IAM)

Focus: Domain 1.0: General Security Concepts, Domain 2.0: Threats, Vulnerabilities, and Mitigations

Objective / Objetivo:

Master authentication factors (MFA, passwordless), account management policies, privileged access management (PAM), single sign-on (SSO), and access control authorization models.

Chapters Covered / Capítulos:

- Chapter 2: Understanding Identity and Access Management

Daily Tasks / Cronograma Diário:

Monday:	Read Chapter 2: Identification, AAA, and Authentication Factors (Something you know, have, are, somewhere you are, something you do).
Tuesday:	Study MFA, Passwordless authentication, and Authentication Log Files/Indicators.
Wednesday:	Study Account Management Policies (credential policies, PAM, deprovisioning, role-based vs group-based, shared account prohibition).
Thursday:	Study Single Sign-On (SSO), Federation (SAML, OAuth) and directory services (LDAP).
Friday:	Study Authorization Models: Role-Based (RBAC), Rule-Based, Discretionary (DAC), Mandatory (MAC - labels/lattice), and Attribute-Based (ABAC).
Saturday:	Weekly Review: Practice Week 2 Flashcards & Chapter 2 quiz questions. Focus on distinguishing SAML (authentication) from OAuth (authorization).
Sunday:	Rest day / Catch-up day.

Bilingual Key Glossary / Glossario Bilingue:

Definition / Descrição
Requiring two or more distinct factors (e.g., password + hardware)
Securing and monitoring highly elevated administrative credential
Allows users to log in once and access resources across multiple
XML-based open standard for exchanging authentication and authori
Token-based authorization protocol used for secure API authorizat
Data owners determine who has access (used in standard filesystem
Access is based on security labels and classification levels (mil
Flexible access control based on user, resource, and environmenta

WEEK 3: Network Infrastructure, Protocols and Security

Semana 3: Infraestrutura, Protocolos e Segurança de Rede

Focus: Domain 3.0: Security Architecture, Domain 4.0: Security Operations

Objective / Objetivo:

Analyze secure network protocols, design, and appliances. Master firewalls, switches, routers, IDS/IPS, honeypots, wireless security (WPA3), VPNs, and network access control (NAC).

Chapters Covered / Capítulos:

- Chapter 3: Exploring Network Technologies and Tools
- Chapter 4: Securing Your Network

Daily Tasks / Cronograma Diário:

- Monday:** Read Chapter 3: OSI Model, Secure network protocols mapping (HTTPS, SSH, SFTP, DNSSEC, SNMPv3, SRTP).
- Tuesday:** Study network infrastructure hardening (switches, routers, firewalls, screened subnets, jump servers).
- Wednesday:** Study Zero Trust concepts (control plane vs. data plane, SASE, secure access service edge).
- Thursday:** Read Chapter 4: IDS vs. IPS (signature vs. anomaly), honeypots, honeyfiles, honeytokens.
- Friday:** Study wireless security (WPA2/WPA3 Personal vs. Enterprise, 802.1x), VPN topologies (Full vs Split, Site-to-site, Always-On), and NAC (Agent vs Agentless).
- Saturday:** Weekly Review: Practice Week 3 Quizzes and Flashcards. Draw a secure network topology with a Screened Subnet and a Jump Server.
- Sunday:** Rest day / Catch-up day.

Bilingual Key Glossary / Glossario Bilingue:

Definition / Descrição
Buffer zone between the untrusted internet and internal private n
Cloud architecture merging software-defined wide area networking
Decoy system designed to attract and analyze attacker behavior in
Latest wireless security protocol replacing WPA2, using SAE (Simu
VPN configuration where only corporate-destined traffic goes thro
Inspects host health (patches, antivirus, firewall status) before
Secure network management protocol that provides encryption, auth

WEEK 4: Host, Cloud, Data Security & Cryptography

Semana 4: Segurança de Hosts, Nuvem, Dados e Criptografia

Focus: Domain 3.0: Security Architecture, Domain 1.0: General Security Concepts

Objective / Objetivo:

Grasp virtualization, containerization, and cloud security frameworks (CASB, IaC, Shared Responsibility). Master cryptography concepts (symmetric, asymmetric, hashing, digital signatures, PKI, CA, CRL, OCSP).

Chapters Covered / Capítulos:

- Chapter 5: Securing Hosts and Data
- Chapter 10: Understanding Cryptography and PKI

Daily Tasks / Cronograma Diário:

- Monday:** Read Chapter 5: Virtualization, Containerization, secure systems (endpoint security, CSP responsibility, IaC).
- Tuesday:** Study mobile device security deployment models (BYOD, COPE) and MDM capabilities.
- Wednesday:** Study specialized/embedded systems security (IoT, ICS/SCADA) and cryptographic data protection (TPM, HSM, secure enclaves, obfuscation).
- Thursday:** Read Chapter 10: Cryptography foundations (hashing algorithms, salting, symmetric vs asymmetric encryption).
- Friday:** Study Public Key Infrastructure (PKI): Private/Public key pairs, CA, CRL, OCSP, CSR, certificate pinning, and formats.
- Saturday:** Weekly Review: Quiz on host security & cryptography. Practice 'Golden Rules' (e.g. Asymmetric encryption: Private key decrypts / signs; Public key encrypts / verifies).
- Sunday:** Rest day / Catch-up day.

Bilingual Key Glossary / Glossario Bilingue:

Definition / Descrição
On-premises or cloud-based security enforcement point placed betw
Managing and provisioning infrastructure through machine-readable
Dedicated cryptographic hardware chip integrated on a computer mo
Uses a single, shared secret key for both encryption and decrypti
Uses a mathematically linked key pair: a public key (for encrypti
Trusted third-party organization that issues digital certificates
Real-time query protocol used to check the revocation status of a

WEEK 5: Threats, Vulnerabilities and Common Attacks

Semana 5: Ameaças, Vulnerabilidades e Ataques Comuns

Focus: Domain 2.0: Threats, Vulnerabilities, and Mitigations (22%)

Objective / Objetivo:

Examine threat actors, attributes, motivations, threat vectors, and attack surfaces. Differentiate between types of malware and master human-based social engineering attacks.

Chapters Covered / Capítulos:

- Chapter 6: Comparing Threats, Vulnerabilities, and Common Attacks

Daily Tasks / Cronograma Diário:

Monday:	Read Chapter 6: Threat Actors (Nation-state, unskilled, hacktivist, insider, organized crime) and their motivations (espionage, financial gain).
Tuesday:	Study Threat Vectors (message, image, file, voice, removable device) and Attack Surfaces (vulnerable software, unsupported apps, shadow IT).
Wednesday:	Study Malware Types (Viruses, Worms, Logic Bombs, Trojans, RATs, Keyloggers, Spyware, Rootkits, Ransomware, Bloatware).
Thursday:	Study Malware Indicators (performance degradation, unauthorized modifications) and detection methods.
Friday:	Study Social Engineering (Impersonation, Shoulder Surfing, Disinformation, Tailgating, Dumpster Diving, Watering Hole, Phishing, Vishing, Smishing).
Saturday:	Weekly Review: Quiz on threats & malware. Memorize the difference between Virus (needs human interaction to execute) and Worm (self-replicating, spreads over network).
Sunday:	Rest day / Catch-up day.

Bilingual Key Glossary / Glossario Bilingue:

Definition / Descrição
Information technology systems, devices, or software used within
Malware that gives an attacker administrative control over a targ
Malicious software designed to hide its existence and other malwa
Targeting a specific group of users by infecting a website they a
Deliberately false or distorted information spread systematically
A security threat originating from within the organization (emplo

WEEK 6: Advanced Attacks, Secure Coding & Risk Management

Semana 6: Ataques Avançados, Código Seguro e Gestão de Riscos

Focus: Domain 2.0: Threats, Vulnerabilities, and Mitigations, Domain 4.0: Security Operations

Objective / Objetivo:

Analyze advanced network attacks (DoS, DNS poisoning, on-path). Understand secure coding concepts, application vulnerabilities (buffer overflow, injections, XSS). Master risk management tools, framework standards (NIST, ISO), and audits.

Chapters Covered / Capítulos:

- Chapter 7: Protecting Against Advanced Attacks
- Chapter 8: Using Risk Management Tools

Daily Tasks / Cronograma Diário:

- Monday:** Read Chapter 7: Network Attacks (SYN floods, On-path, SSL stripping, DNS poisoning, Domain hijacking, Replay).
- Tuesday:** Study Secure Coding Concepts (input validation, error handling, race conditions, obfuscation, HTTP headers, secure cookies, code signing).
- Wednesday:** Study Application Attacks (Memory leaks, Buffer overflows, SQL injection, DLL/LDAP/XML injection, Directory traversal, XSS, CSRF) and Automation/Scripting in Ops.
- Thursday:** Read Chapter 8: Risk Management basics (vulnerability scanning, validation of remediation).
- Friday:** Study Network Traffic Tools (packet captures, tcpdump, tcpdump, NetFlow) and Compliance Frameworks (ISO 27001, NIST CSF 2.0, NIST RMF, benchmarks).
- Saturday:** Weekly Review: Practice advanced attacks and frameworks quiz. Focus on how input validation prevents injections and how parameterization secures databases.
- Sunday:** Rest day / Catch-up day.

Bilingual Key Glossary / Glossário Bilingue:

Definition / Descrição
Attacker intercepts and silently alters communications between two
Corrupting Domain Name System cache to redirect users to malicious
Vulnerability occurring when a program writes more data to a memory
Injecting malicious client-side scripts into web pages viewed by
Flexible, risk-based cybersecurity standard structured into 6 functions
Network protocol developed by Cisco for collecting IP traffic information

WEEK 7: Asset Protection, BCP, Policies & Incident Response

Semana 7: Proteção de Ativos, BCP, Políticas e Resposta a Incidentes

Focus: Domain 4.0: Security Operations, Domain 5.0: Security Program Management and Oversight (20%)

Objective / Objetivo:

Differentiate physical controls, hardware asset management, and backup topologies. Master Business Continuity Plan (BCP) elements (BIA, RTO, RPO, disaster recovery exercises). Understand incident response (IR) plans, processes, and proactive threat hunting.

Chapters Covered / Capítulos:

- Chapter 9: Implementing Controls to Protect Assets
- Chapter 11: Implementing Policies (Incident Response & Threat Hunting)

Daily Tasks / Cronograma Diário:

- Monday:** Read Chapter 9: Physical security controls (access badges, vestibules, perimeter security, sensors).
- Tuesday:** Study Asset Management and Backup Strategies (image backups, frequency, testing, geographic considerations).
- Wednesday:** Study Business Impact Analysis (BIA) concepts (RTO, RPO, MTBF, MTTR, continuity of operations).
- Thursday:** Study Disaster Recovery Plan (DRP) testing methods (tabletop, simulations, parallel, fail over).
- Friday:** Read Chapter 11: Incident Response Plan (IRP), communication plan, Incident Response Process (Preparation, Detection, Containment, Eradication, Recovery, Lessons Learned), and Threat Hunting.
- Saturday:** Weekly Review: Drill physical controls, BCP metrics, and the 6 steps of the Incident Response Process. Practice Week 7 Flashcards.
- Sunday:** Rest day / Catch-up day.

Bilingual Key Glossary / Glossário Bilingue:

Definition / Descrição

The maximum acceptable amount of time a system can be down before

The maximum targeted period in which data might be lost due to a

Standard 6-step lifecycle: Preparation, Identification, Containme

Proactive process of searching across networks/endpoints to detec

Discussion-based simulation where security team members talk thro

Physical security mechanism consisting of two interlocking doors,

WEEK 8: Final Consolidation & Full Mock Exams

Semana 8: Consolidação Final e Simulados Completos

Focus: All Domains (1.0 - 5.0) Review

Objective / Objetivo:

Drill weaknesses using full practice exams. Solidify flashcards using Spaced Repetition, review mind maps, master exam time management, and build testing confidence.

Chapters Covered / Capítulos:

- All Chapters (1 - 11) Review

Daily Tasks / Cronograma Diário:

- Monday:** Identify weak domains from previous practice quizzes and review corresponding chapter summaries in the study guide.
- Tuesday:** Perform a complete spaced-repetition drill of ALL flashcards (focusing on Leitner Box 3, 4, 5).
- Wednesday:** Review and interact with the Mind Maps in `mindmaps.html`. Tracing relationships between systems and protocols.
- Thursday:** Take Practice Exam Part 1 (20 Situational Questions) under timed, simulated exam conditions (no notes).
- Friday:** Take Practice Exam Part 2 (20 Situational Questions) under timed conditions. Review mistakes critically.
- Saturday:** Final Polish: Memorize acronyms, review the 'Golden Rules' sheet, verify all files in your `comptia\_study` folder. Prepare your testing plan (exam day tips).
- Sunday:** Exam Day Readiness: Sleep well, stay calm. You are ready to pass the CompTIA Security+ SY0-701!

Bilingual Key Glossary / Glossario Bilingue:

Definition / Descrição
CompTIA exams are heavily acronym-based. Ensure you can immediately
Exam questions often present long scenarios. Identify the actual
When multiple options seem technically correct, select the option
